

Small Animal Rotating Internship

New England Animal Medical Center offers a rotating internship with a primary focus on clinical training with weekly didactic experiences and quality of life. Our practice provides intensive training in the areas of emergency and critical care, internal medicine, and surgery in addition to general practice.

We currently have residency training programs in surgery and emergency and critical care medicine; as well as a specialty small animal medicine internship and specialty surgery internship program. The program includes topic based lectures, journal club, EKG rounds and morbidity/mortality rounds and weekly resident level seminars. The hospital is fully equipped including an on-site clinical laboratory (CBC, chemistry, urinalysis and culture, blood gases, lactate, blood typing, coagulation monitoring and microbiology), a mechanical ventilator, EKG monitors, blood pressure monitors for direct and indirect blood pressure, pulse oximetry, end-tidal CO₂, oxygen cages, imaging equipment including IDEXX digital radiology, ultrasound, CT scanner, in-house blood bank, oncology treatment room and chemotherapy hood. We have rigid and flexible endoscopy equipment. Our surgery service is equipped with a surgical laser, arthroscopy, laparoscopy and ASIF bone plating. Radiographs are submitted for interpretation by a board certified radiologist.

Echocardiography and cardiology consultations are available 3 days a week. The goal of our program is to provide solid clinical training in preparation for a residency training program or private practice. We enjoy an excellent relationship with local veterinarians who refer a wide variety of emergency, critical care, surgical and internal medicine cases. Our goal is to make this internship rewarding and educational for both the interns and our staff. Interns will have time to study and read about their caseload to further their education. The interns are scheduled for a five day work week. Interns attend weekly rounds. For further information please email Nicole Beckel, DVM, DACVECC at vets@neamc.com, or see our program listing on www.virmp.org.
